

# EMI CALCULATOR

## PROBLEM STATEMENT

Need to automate the following activities using Selenium + Java.

**Note:** In this use case, you need to automate below scenarios using the "<https://www.moneycontrol.com>" portal.

## Key Activities to implement:

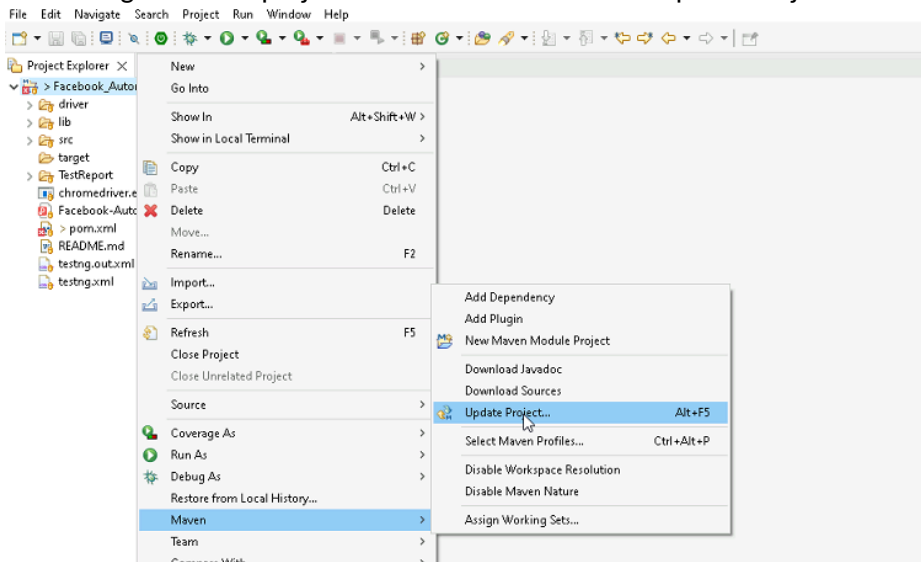

SN	Test Steps
1	Mouse hover on Personal Finance and click on "Tools" under Explore.
2	In Tools page, click on "Home Loan EMI Calculator".
3	Enter the load amount as "3000000".
4	Enter the load period as 20.
5	Enter interest rate as "10.5".
6	Enter Upfront charges as "10000".
7	Click on Submit.
8	Print Total payment and EMI in console
9	Under load payment schedule table, print the following details 7th year. 1. EMI Payment in the Year 2. Interest Payment in the year 3. Principal payment in the year.
10	Print "Outstanding Principal at end of year" value for 5th year in the table.

**NOTE:** "Please do not delete any file in the src folder. But you are free to add any other file".

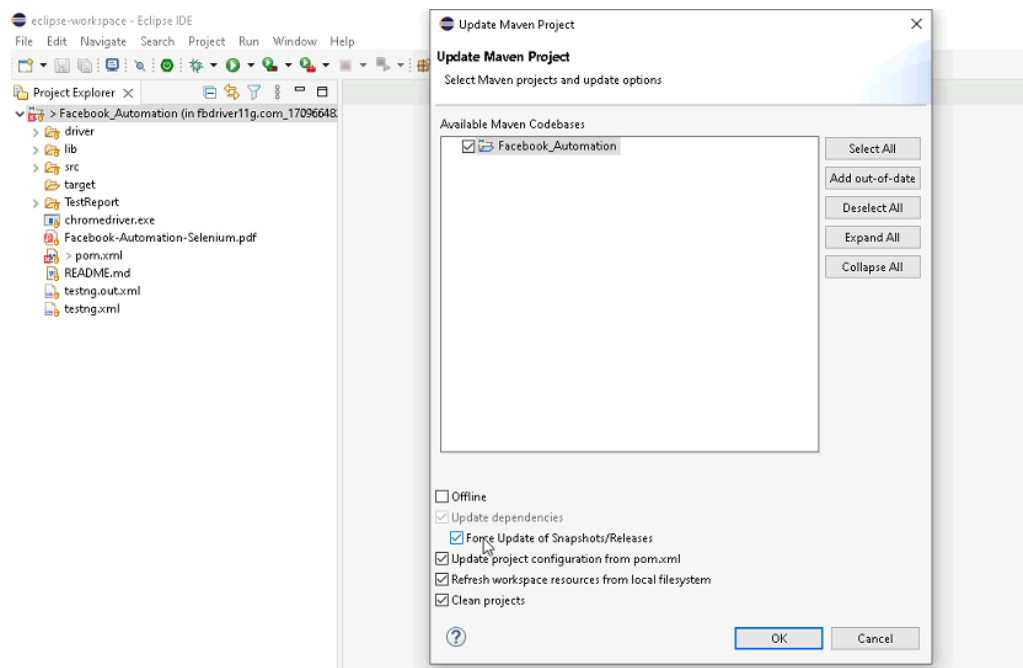

## Pre-requisite:

As soon as you import project in eclipse, update the project using maven update option as below. This is to resolve issue if any maven dependency not downloaded properly:

### 1. Right click on project : Go to “Maven” : Select “Update Project”

### 2. In Update Maven Project Box Select “Force Update of Snapshots/Releases” and click OK

Template Code Structure: Packages and files you will be required to work upon. Other Files and packages you can ignore.

Package	Class/File	Description
pages	Emi_Calculator_L1_Pages.java	<ol style="list-style-type: none"><li>1. All core activities (mentioned in list above) to be performed here.</li><li>2. The comments associated with each templated method here describe the expectation.</li><li>3. You can define locators and xpath here.</li><li>4. Declare any variable/object you need to share data/status between different methods.</li><li>5. Do not modify the signature of methods declared here.</li><li>6. You can create additional supportive common methods in CommonEvents class.</li></ol>

## Expectations:

- 1) Learners should write automation script using Java and selenium to automate all the steps in the above question. In other words, automation script should perform all mentioned steps.
- 2) Learners should not use any tools to create the xpath. They should develop the xpath/cssselector on their own.

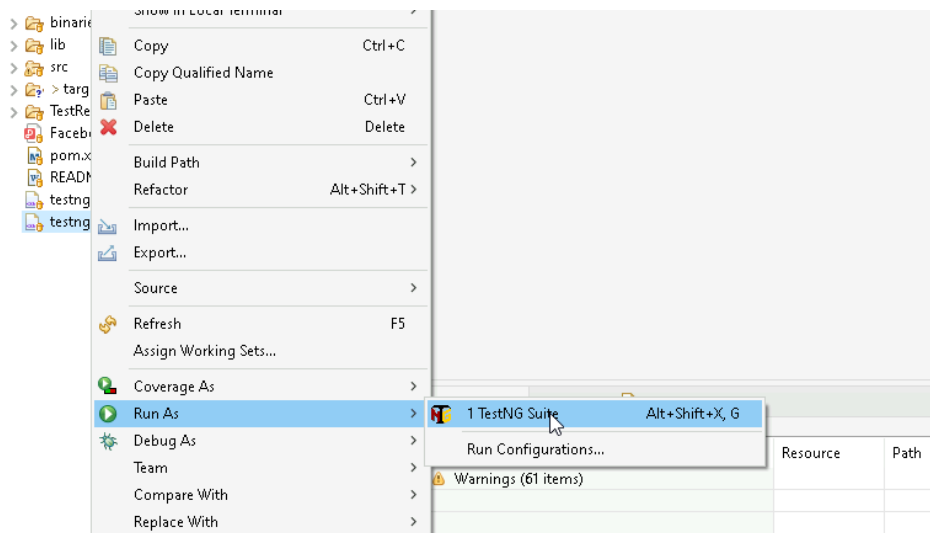

## IMPLEMENTATION/FUNCTIONAL REQUIREMENT

### 1.1 CODE QUALITY/OPTIMIZATIONS

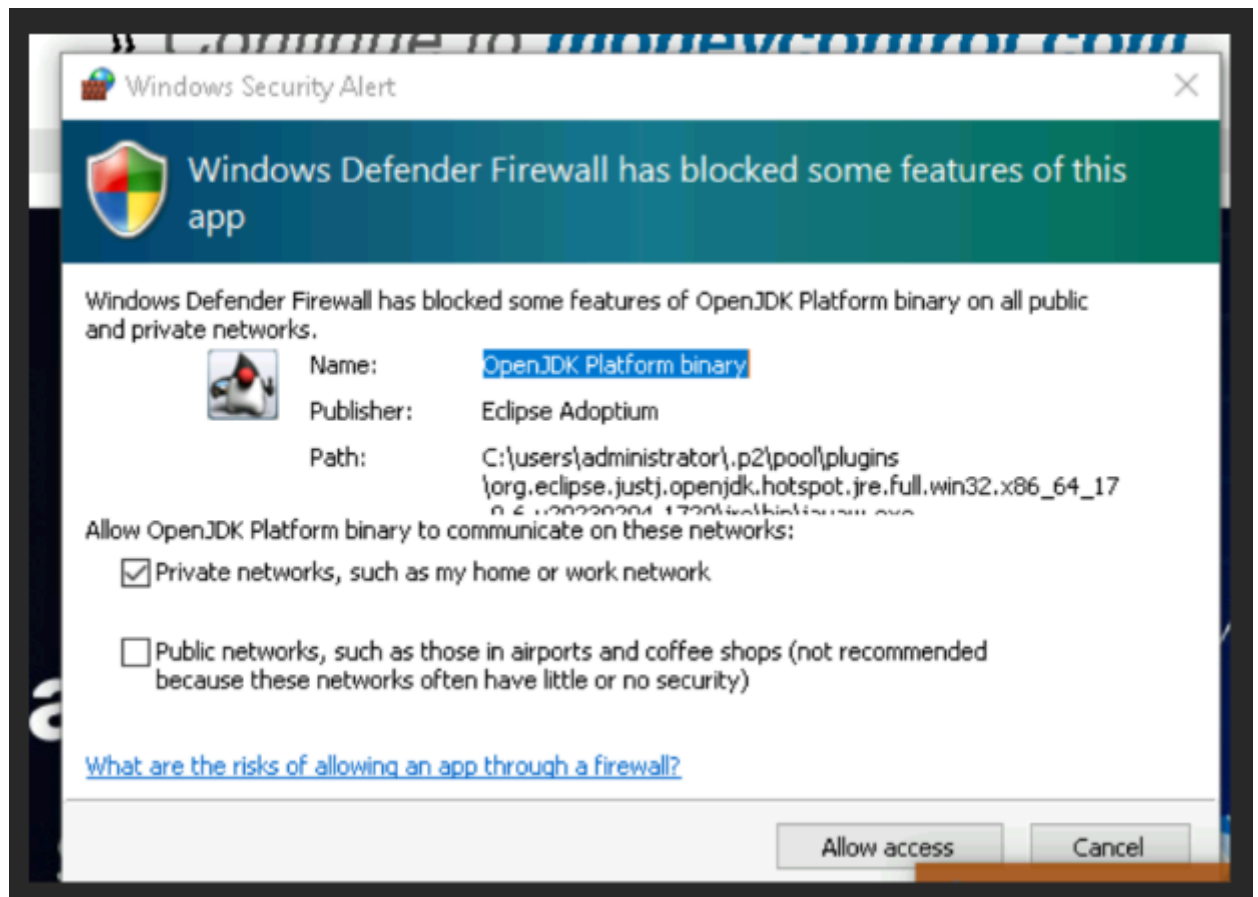

1. Associates should have written clean code that is readable.
2. Associates need to follow SOLID programming principles.

## EXECUTION STEPS TO FOLLOW

1. You are mandatory required to run test cases for applications before final submission. Without which project evaluation will not happen.
2. You can launch test cases any time as follows: Right click on testng.xml and run TestNGSuite

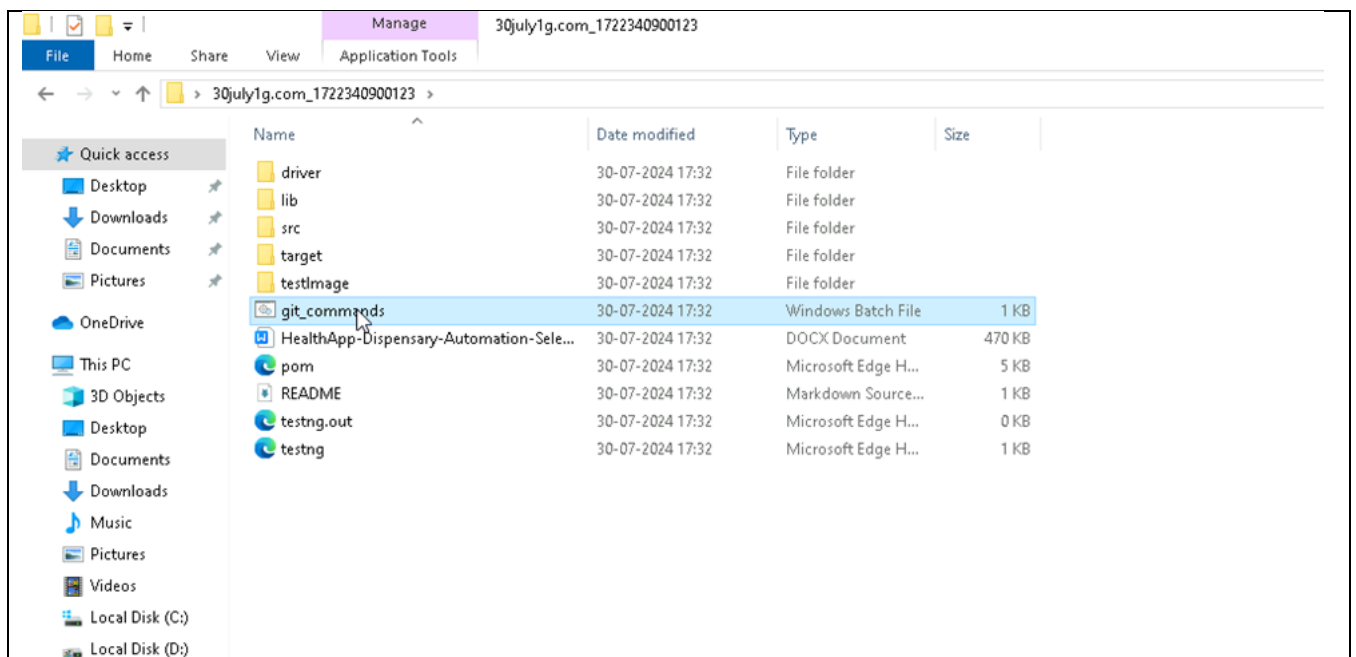

3. You may get the below pop up after launching test cases for seeking permission to open the browser or not. Please select "Allow access" in this case.

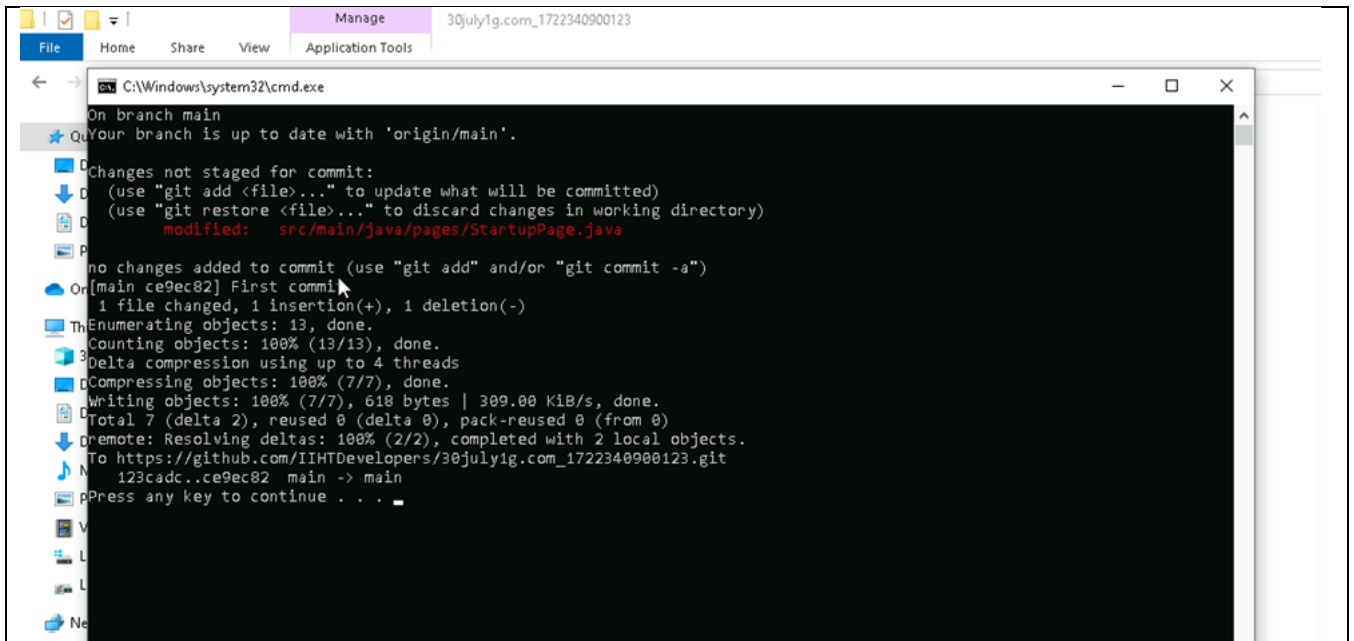

3. Before final submission, you are also required to push your code to GIT. Following are the steps to follow:

In your project folder, you will find a batch file named `git_commands`

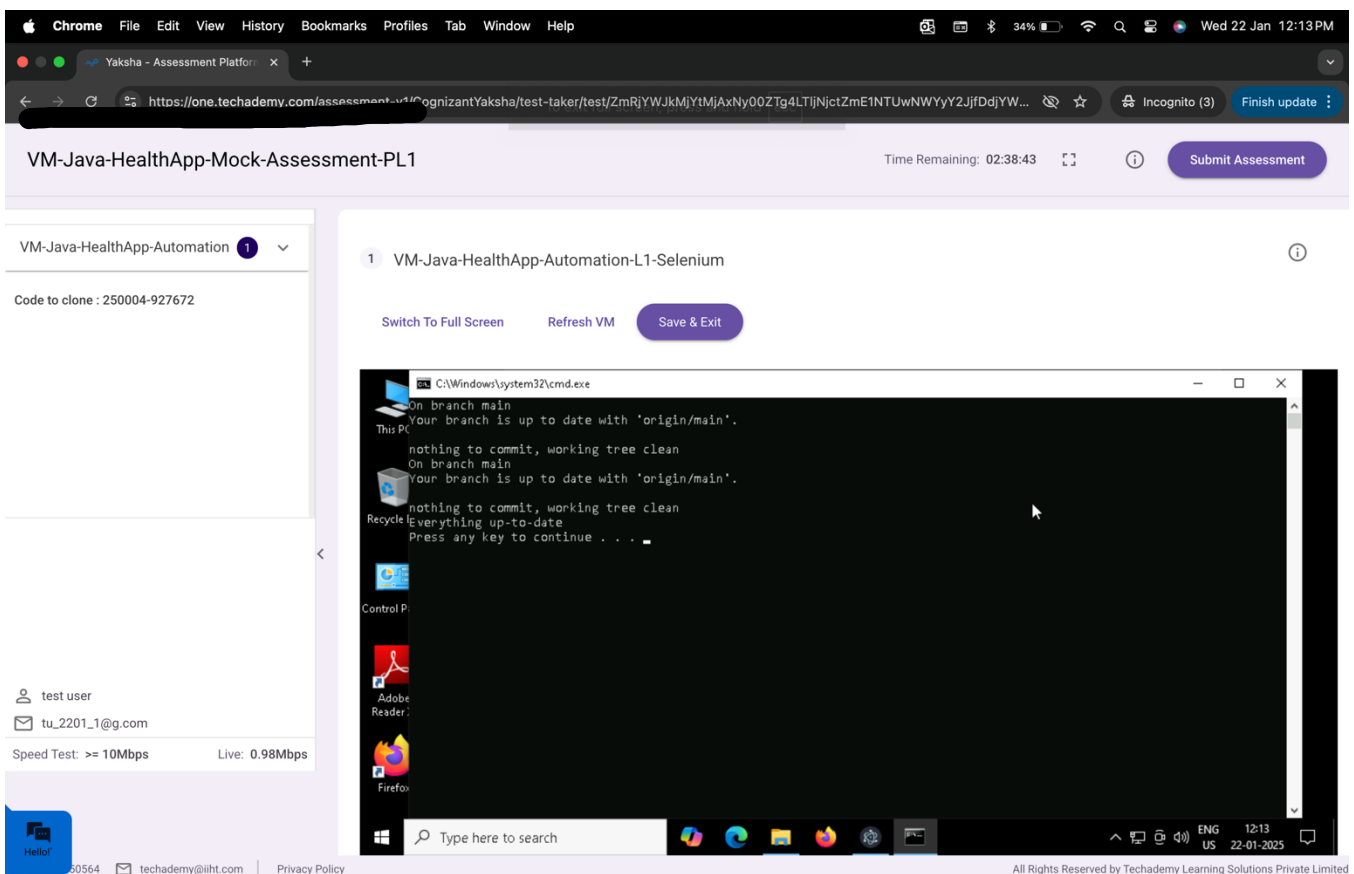

Double-click the batch file to run it. It will run the commands to push your code to GIT.

Once the code is pushed to git, you can go for the final submission of the assessment.

- Press escape to come out of Fullscreen mode.
- Submit the assessment.

After the successful submission of the assessment, you will get a confirmation message displayed on your screen.

---

All the Best
